

WHITEPAPER

Version 1: (27th May 2021)

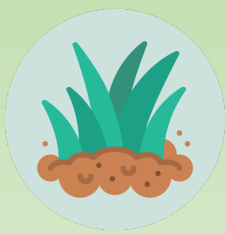

Welcome to LawnDeFi Finance

We are a Secure Yield Farming Aggregator on Binance Smart Chain with lots of unique and creative features that let you earn, shop and win!

Our Team

- **1 Blockchain and Frontend Developer**
- **1 Marketing Specialist cum UX/UI Designer**
- **2 Community Managers**

****Our team is anonymous but we will soon assign each of the roles to one of the Profile Pictures in our Telegram group, that way it will be easier to contact each one of us for specific information.**

LawnDeFi's Security

The list of features we've added to our platform has taken a lot of thinking and man-hours. Making a lot of money in 24 hours and fleeing with it could be enjoyable, but it would just do more harm in a community that already struggles to find honesty. So far, everything we've done has been predicated on a long-term possibility and proposal. People will ultimately hear our voice and support our community and objective of changing the DeFi space if we put the effort and time into developing the safest platform on the Binance Smart Chain.

Migration Code Removed

The Migration code has been removed, meaning that it is impossible to migrate staked assets or Liquidity Pools by the development team. In addition to this, there are no "call" or "delegateCall" functions hidden in our contract. The decision to remove Migrator Code was taken to ensure the trust of our investors and community. The contract also is without any proxy.

```
163
164     // Set the migrator contract. Can only be called by the owner.
165     function setMigrator(IMigratorChef _migrator) public onlyOwner {
166         migrator = _migrator;
167     }
168
169     // Migrate lp token to another lp contract. Can be called by anyone. We trust that migrator contract is good.
170     function migrate(uint256 _pid) public {
171         require(address(migrator) != address(0), "migrate: no migrator");
172         PoolInfo storage pool = poolInfo[_pid];
173         IBEP20 lpToken = pool.lpToken;
174         uint256 bal = lpToken.balanceOf(address(this));
175         lpToken.safeApprove(address(migrator), bal);
176         IBEP20 newLpToken = migrator.migrate(lpToken);
177         require(bal == newLpToken.balanceOf(address(this)), "migrate: bad");
178         pool.lpToken = newLpToken;
179     }
180
```

Tokenomics

\$LWNS is the token that powers the LawnDeFi ecosystem

Chain	Binance Smart Chain (BEP20)
Token Name	LawnDeFi Token
Symbol	\$LWNS
Contract Address	0x84c1733a372ffb7c862459f92eba5fb57eaf75e4
Initial Minted	10,000 \$LWNS

Earn \$LWNS from LawnFarms and LawnStakes, win it in LawnLottery, or buy it on the exchange.

Then explore its use cases:

- ❖ Use it in LawnFarms to earn more \$LWNS.
- ❖ Stake it in LawnStakes to earn free tokens.
- ❖ Buy lottery tickets in LawnLottery to try your luck. (Coming Soon)

Smart Contracts

Our deployed smart addresses are listed here.

Contract	Address
LawnToken Contract	0x84C1733A372FfB7c862459f92ebA5Fb57EAF75E4
Masterchef Contract	0x78A91F6Ec8FCb40c416715A14302F37A9FE465D8

Roadmap

Aiming to be community driven, we have came out with this roadmap with targets for the future.

Short Term ()

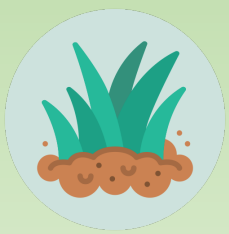

-  Project Launch
-  Fair Launch (No Presale)
-  Contract Verification
-  Farm Launch
-  \$Lawn Staking
-  Socials (Telegram and Twitter)

Mid Term ()

- Liquidity Locked initial 15 Days (Renewable)
- Contract Audits
- Listing application on CoinMarketCap(CMC), Coingecko, DappRadar, etc.
- Partnerships

Long Term

- Exchange Listing (Coinsbit, Bitmart, Bittrex, etc.)
- NFT Marketplace (Art Gallery)
- Lottery
- Gamification (Points-Reward System and Games)
